- Plaques

Acrylic Branding Wall System

Illuminated Signs

Our broad range of methods for illuminating signs are suitable for both interior and exterior use, including light-boxes, spotlighting and LED halo effect lighting. We can work to your unique design requirements to create imposing and aesthetically pleasing signs to help you create the right impression for visitors to your company.

Large Scale Projects

Harrisons work on projects of any size, from a single sign to large scale re-brand projects. We have recently worked on a number of stadium concourse-catering re-brands, including Manchester United's Old Trafford Stadium, Hull KC stadium, Reading FC and the new Ricoh Arena complex at Coventry, to present suppliers' brands in a more unified and contemporary way, with clearer signposting for each of the products at the point of sale.

CNC Cut Lettering

Harrisons continually invests in the latest technology to be able to offer cutting edge products to our customers. We use a high-tech computer-controlled router to cut letters and graphics from a variety of materials, from PVC foamex and acrylic to aluminium and wood, to give a bold and impressive result. Lettering can be fitted flush to most surfaces, or can be raised from the background to give a striking 3D effect.

Large Format Graphics

Enjoy the "widescreen experience" with our large-format graphic printing capabilities. Our UV stable high-resolution digital prints provide a cost-effective way of reproducing large scale images and graphics to give your sign the eye-catching edge you require.

DDA Compliant Tactile Signs & Labels Internal & External

Tactile signs provide practical help to people with vision impairments by incorporating embossed pictograms, text and Braille to give a tactile element to the signs. We have signs available from stock or we can supply signs specifically to your requirements.
